SUMMARY

Game developer with more than **6 years of experience** focused on mobile games using **Unity engine** and **C#**. I excel in various aspects of game development, including **designing project architecture**, **developing infrastructure systems**, **creating tools**, and **implementing gameplay features**. With an **additional 2 years of experience** in software engineering and an **MSc degree in software engineering**, I have a solid educational background that complements my practical experience.

AREAS OF EXPERTISE

- Proficient in **C#**, **SOLID** methodology and common **OOP design patterns** in game development.
- Skilled in writing and maintaining **Android plugins** to enable seamless integration with native platform features.
- Experienced in managing and updating **live operations** (**Live Ops**) for games, including **feature updates**, **event planning**, **continuous content delivery**, and new mini games.
- Skilled in **optimizing game performance** to deliver smooth and polished gameplay.
- Experienced in **game analysis**, **F2P concepts**, **monetization**, and **economy design**.
- Knowledge of **shader programming** using **HLSL** to modify or write costume shaders.
- Great capacity for **learning** and implementing **new technologies** and methodologies.
- Excessive **analytical** and **data driven problem-solving skills**.

CAREER HISTORY

Game Developer Jul. 2023 – Present (3 yrs. 3 mos.)

Magrid Learning Solution

- Added new content and features to a game with **over three years of operation** while maintaining full **backward compatibility**.
- Designed and implemented a **shared library** to unify validations and models across client and server, enhancing maintainability and consistency.

- Refactored the project architecture based on the **MVP (Model-View-Presenter)** architecture to promote separation of concerns and prevent recurring issues**.**
- Used the **Strategy pattern** to efficiently adapt to different requirements and implemented **dependency injection** to enable comprehensive unit testing with high coverage.
- Developed and integrated **smoke tests,** accelerating the release cycle and enabling faster deployment of new versions.
- Developed a **custom editor** for designing new levels and contents, **streamlining the content creation process.**

Game Developer May 2021 – Oct. 2023 (2 yrs. 6 mos.)

Funtory Studio

- Developed "Jump Up 3D" and "My Monster Pet" with **over 2 million downloads** on Google Play.
- Closely **collaborated with CTO** to develop an **in-house infrastructure** to ease game production.
- Served as a Business Technical Interface, facilitating collaboration with 3rd party studios by providing assistance in **complex mechanics** and **optimization**.
- Worked closely with data engineers to polish and improve games based on game analytics data and users' feedback.
- Developed an in-house SDK for asset bundles to deliver **Google instant games**, making "Robo Race" the company's most profitable game.
- Presented multiple workshops to **share knowledge** in development team in the following areas. (**Git**, **Unity DOTS**, **Clean code vs Disposable code**)

Game Developer Oct. 2020 – Dec. 2020 (3 mos.)

Segal Games

- Utilized SOLID methodology and common OOP design patterns in game development.
- Designed a hyper-casual game from scratch and which is published on Voodoo platform.
- Managed a small multi-disciplinary team of 3 people, responsible for managing resources and deadlines to deliver the game based on the business plan.

Software Engineer Oct. 2018 – Sep. 2020 (1 yr. 11 mos.)

Intelligent Information Solutions Center

- Developed and maintained mobile side of Motoshub using React Native (a social media platform based on Oxwall).
- Developed native android libraries for sharing files and editing images to be used in React Native.
- Responsible for iOS maintenance and issues.

Independent Game Developer Jan. 2021– Present (5 yrs. 6 mos.)

- Designed, developed, and published Bridge Run (game originally created for Bazaar Game Jam 2022 with topic of “a runner game”)
- Designed and developed Playground to demonstrate and test my skills in writing shaders, physic-based mechanics, rope and water simulation, and etc.
- Designed and developed Rebal. A pixel art, runner, platformer game.
- Developed and published Waterfall for the final project of the "Game Design" course at University of Science and Technology.

EDUCATION

Master of Computer Science 2018 – 2021

Sharif University of Technology

Major: Software Engineering

Thesis: Predicting opponent’s movement in Dota 2

Bachelor of Computer Science 2013 – 2018

University of Science and Technology

Major: Computer Engineering

Teaching Assistant

Software Engineering I, by Dr. Moslem Habibi Fall 2019

Software Engineering I, by Dr. Vahid Rahimian Fall 2019

Data Structure and Algorithms, by Dr. Hossein Rahmani Fall 2016

Formal Languages and Automata, by Dr. Hossein Rahmani Spring 2016
